Shipping is free for orders over \$75!

Quarto!

This game challenges players to create a line of 4 pieces that share a common characteristic - tall or short, round or square, light or dark, solid or hollow. The trick is your opponent chooses which piece you will play. It is very simple to learn yet is fascinating and addictive! The challenge comes in seeing the common characteristic in the shapes you can make in a line to win! Attractive wood pieces make this a perfect coffee table item. Ages 8+ \$29.95
Mensa Top 5 Best Games; Games Magazine Top 100 Games; Parents™ Choice Award

Tantrix Game Pack is a hexagonal tile strategy game invented by Mike McManaway from New Zealand. Each of the 56 different Bakelite tiles in the set contains three lines, going from one edge of the tile to another. No two lines on a tile have the same color. There are four colors in the set: red, yellow, blue, and green. No two tiles are identical, and each is individually numbered from 1 through 56. Like all truly great games, Tantrix is very, very simple to play, it can take from a few seconds to half an hour to

complete a game, it's highly compelling, and yet there are very few rules. You can't just play one game, it really isn't possible. The second you've jubilantly completed your first puzzle, you just have to do another. Play in a group or alone! Available in Black Tiles only. Ages 8+ \$19.95

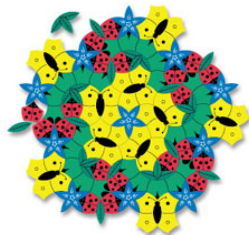

Tantrix Discovery Set

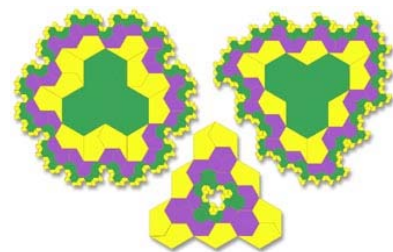

This is a smaller 10 piece set for beginners. You simply connect the loops by color based on the number on the opposite side of the tile. For example, take tiles 1, 2, 3, 4 and 5 and make a red loop as in the photo. Or take tiles 1-3 to make a yellow loop and so on. Make 10 different loops! The tiles are made from Bakelite which is a plastic that feels great in your hands and is very durable. Colors come in Green or Black tiles. Ages 6+ \$6.95

BKR Games and Toys

Puzzellations and Fractallations are foam tessellation puzzles that were designed by a mathematician. Children can't help but be attracted to these puzzles. The puzzles combine art and math to stimulate creativity. Most of them are simple enough for five-year olds, but can also challenge older kids and the brainiest adults.

In the Garden Puzzellation

These puzzles have many different solutions, allowing them to be used over and over again.

Fractallations

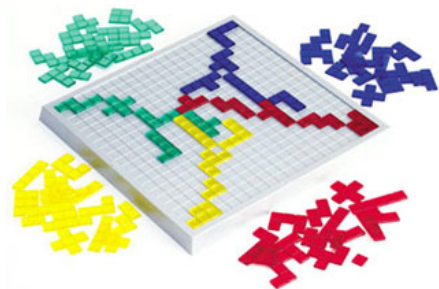

These foam pieces have magnetic backings.

- In the Garden Puzzellation 77 magnetic pieces - Ages 5+ \$19.95
- Fractallations 270 magnetic pieces - Ages 7+ \$29.95

Heximoes - This is dominoes with 6-sides! This skill-building game is as easy to learn as ordinary dominoes, but six times the fun! With each move, you must match at least two sides of your Heximoes to game pieces that have already been played. This fast-paced game builds visual discrimination and strategy skills—and can be played at different skill levels. Ages 7+ \$14.95

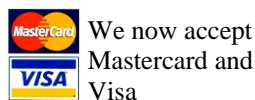

Blokus was recommended to us by another family that loves visual games. This one is easy to learn and can be hours of fun for everyone. Blokus has won Game of the Year awards in both Europe and Japan. Kids take turns placing as many of their 21 geometric shapes on the board as they can, but only the corners of their own pieces may touch. The real challenge comes toward the end of the game, when they must squeeze their remaining pieces into increasingly limited space. Great for supporting geometric and spatial concepts; easy to learn with fast play that engages kids immediately. 12" x 12" board, 84 playing pieces. 2 to 4 players. Ages 7+ \$29.95

Travel Blokus

A smaller set for 2 players. Play on the go! Ages 7+ \$19.95

Dr. Toy's Best Vacation Products 2003

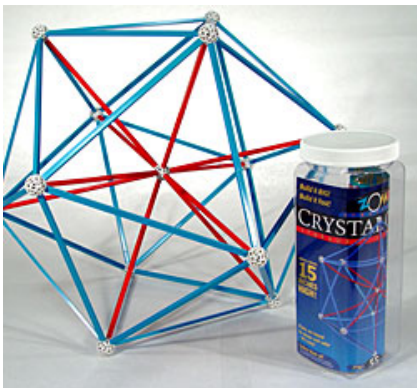

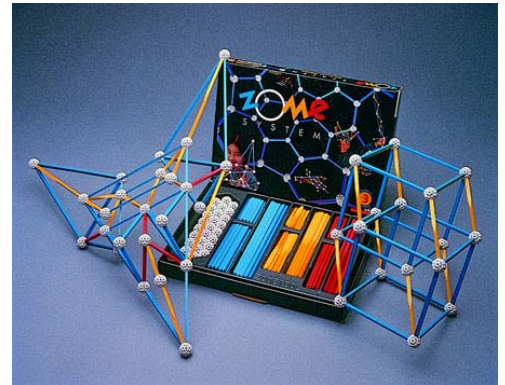

BKR Games and Toys

We've found Zome to be one of the best building and construction toys for bright kids. Zome is precise enough in its measurements that it is used by scientists, mathematicians, engineers and architects. Like K'nex or tinker toys you can create all kinds of structures, shapes, and buildings. Unlike K'nex or tinker toys you can create more complex shapes like DNA helixes, Buckyballs, Geodesic Domes and molecular models. Zometool.com also has free lesson plans and activities you can download from their website. Children of all ages will find this toy exciting and provide endless hours of fun!

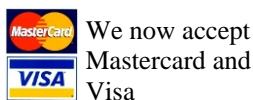

Zome Pioneer Kit - The Pioneer Kit is great for people who have never experienced Zome. Build the simplest models, from a house or a flower, to more advanced models such as a "squashed" icosahedron or a shadow of a 4-D cube. 121 pieces Ages 6+ \$19.95

Crystal of Life, Icosahedron Kit - This beginner kit has 55 pieces. The Icosahedron is one of the five perfect 3-dimensional forms called Platonic Solids. It is also the underlying structure of the geodesic dome. Ages 6+ \$9.95

5th Element, Dodecahedron Kit - This is another beginner kit with 71 pieces. The most beautiful of the 5 perfect Platonic solids, the dodecahedron was considered by the ancient Greeks as the "5th Element". A snap to build, you can hold this model up to the sunlight to cast beautiful shadows. Ages 6+ \$9.95
